SKILLS

Product:

- Product Roadmap · Backlog Management · Agile/Scrum · Sprint Planning · OKRs/KPIs · PRD · Go-to-Market · Market and User Research · Stage Gate · Stakeholder Management · RFI/RFP · Build/Buy/Collaborate/IP Strategy

AI & Technology:

- Agentic AI · Blockchain · GenAI · IoT · MS Copilot · (Anthropic) Claude Code, Design, Cowork · Azure DevOps · ServiceNow · Tableau · PowerBI · PowerApps · Visio

Domain Expertise:

- Energy & Carbon Accounting · 24/7 Clean Power · EACs (REC/GO/GC) · Green Hydrogen · E-mobility · EMS · VPP · P2P Energy Exchange

EDUCATION

Innovation Management MSc
Erasmus University Rotterdam
Creative Technology BSc
University of Twente

LANGUAGES

English Fluent
Russian Native
Dutch Intermediate

PROFILE

Product Owner and Innovation Analyst with 8+ years taking emerging technology from concept to commercial product. At Shell, I ran the full cycle — from opportunity identification and pen-and-paper PoVs, through 4 POCs, to a €22M+ rNPV product in the 24/7 clean energy domain. Comfortable in deep tech (blockchain, GenAI, IoT, energy systems) and equally focused on the business case behind it. Building AI-native, with hands-on experience in agentic workflows, Claude Code, and MS Copilot.

EXPERIENCE

Senior Innovation Analyst & Product Owner

Shell · Emerging Technology Sep 2021 – Dec 2025

- Delivered a €22M+ rNPV product in the 24/7 clean power domain — measured by risk-adjusted business case approved at executive stage gate — by running 3 PoV exercises (2 deprioritised early), leading 4 POCs across power, green hydrogen, heat, and storage teams, and owning the full product roadmap from discovery through go-to-market launch.
- Reduced compliance risk and improved data accountability — measured by successful audit readiness — by defining PRDs, managing cross-functional sprint ceremonies, and aligning regulatory, engineering, and commercial stakeholders.
- Managed a €2M annual R&D portfolio on time and on budget — measured by OKR achievement — by defining build/buy/collaborate/IP strategy through vendor market analysis, Agile backlog prioritisation, and stage-gate risk reviews.
- Accelerated GenAI adoption — measured by 3 production-ready prototypes from a 25-person hackathon — by leading user research, framing agentic AI use cases, evaluating MS Copilot and Claude (Anthropic), and presenting to an 8-person leadership board.
- Identified Blockchain × GenAI and VR/Metaverse opportunities by conducting market scans, evaluating Gemini and multimodal AI tools, and running structured RFI/RFP processes.

IT Business Analyst — IoT Products

Shell Jan 2020 – Aug 2021

- Took an IoT safety wearable from zero to validated and scaled — pilot at first Shell asset, handed off to operations who expanded to 5+ assets — by leading requirements gathering, RFI/RFP vendor selection, writing user stories, and managing the Agile backlog in Azure DevOps.
- Improved product stability for 10+ environmental safety applications by running supplier governance reviews and translating user feedback into prioritised backlog items.

IT Business Analyst

Accenture Oct 2017 – Nov 2019

- Delivered enterprise ServiceNow implementations for 3 global clients — on-time delivery and client sign-off at each milestone — by translating requirements into sprint-ready specs, leading client onboarding, and running train-the-trainer sessions post-launch.

Innovation Services Intern

Philips Lighting Jan 2017 – Aug 2017

- Researched smart lighting opportunities in co-working spaces — independently securing research agreements with B.Amsterdam, WeWork, and others — delivering user research findings that shaped Philips' connected lighting proposition.

Creative Technology R&D Intern

Roessingh Research & Development Feb 2016 – Jul 2016

- Designed and hospital-tested an assistive tech prototype for dementia patient elopement prevention — delivered an evidence-based finding that ruled out the approach and informed the next iteration.

AI-Native Product Development

Personal Projects 2026 – Present

- Built a portfolio website using Claude Code and Claude Design — hands-on fluency with agentic AI-assisted development from design to deployment. Live: svetlana-portfolio-iota.vercel.app
